## Customer Reviews

I loved this book. This book answered many questions for me about the nature and causes of this awful disease and how traditional treatment is not the only answer. It is a touching and informative story of one persons personal experience with cancer and how she defied the odds. It is written with humour and emotion. It is obvious the author has done her research regarding dietary and lifestyle changes as an alternative to traditional cancer treatments, and is eager to share her knowledge to

help the many cancer sufferers who are looking for a way to gain some control of their illness. It is personal and emotional - giving an insight to the emotions felt upon finding out you have been diagnosed with cancer and given a short time to live. Her brave decision to give herself the very best chance of being a mother to her children was not only emotional and inspiring but leaves the reader with a positive and hopeful outlook and a lot of helpful advice to improve the outcome of cancer treatment. This book gives vital information to help people diagnosed with cancer to enable them to approach their treatment with an informed mind. If you or someone you love are faced with cancer you owe it to yourself and them to read this book.

This book is truly inspiring and makes you stop and think about life and what you would do if you found yourself in this situation. There was so much great information in the book and I was touched by the remarkable resilience and courage of this young lady. Would definitely recommend.

This book is an honest account of how this courageous young woman tackled the confronting diagnosis of a brain tumor, in her own way, by making tough decisions to go against mainstream medicine. Her story is quite remarkable and extremely inspirational and it goes to show with a positive mindset, anything is possible. It is well written with a positive outcome, an inspiring read.

Reading this book made me feel more alert, my sister was diagnosed with a grade 4 tumor in the back right side of her brain the size of a large lemon in October. She did do chemo and radiology but now she isn't doing anything because she had a really bad reaction to the chemo pills so they stopped her from taking them. Now we're just waiting, trying to find another way to help.
